# Advantage Max Service Contract Option with Annual Data Center Health Check

Maximizing small- and medium-sized data center uptime and performance while reducing costs.

Managers of modestly sized data centers are just as likely as their large-enterprise counterparts to encounter limited floor space, inefficient power and cooling infrastructure, and rising operations costs — all while under stricter budget constraints.

The Schneider Electric™ Advantage Max Data Center Health Check helps address these issues. Using industry-recognized StruxureWare™ for Data Center technology, and streamlined for data centers and IT rooms of up to 5,000 square feet, this offering includes proactive asset planning guidance and analysis of critical power, cooling, and room layouts. Recommendations are based on industry best practices.

## Advantage Max Service Contract Option

The Advantage Max Service Contract Option can be added to existing Schneider Electric Advantage Plus, Prime, or Ultra service contracts, providing Asset Capacity Trending Reports for Schneider Electric UPS and cooling systems, in addition to the Annual Data Center Health Check.

- **Annual Data Center Health Check**

The Annual Data Center Health Check consists of two components: an Asset Management Plan and an IT Room Audit.

- **Asset Management Plan**

Summary table aggregating individual Schneider Electric UPS and cooling system capacity and component reliability data, helping to maximize data center uptime in a budget-conscious manner.

- **IT Room Audit**

The annual IT/computer room audit benchmarks critical data center domain operation with respect to capacity, uptime, performance, and energy efficiency, documenting potential risks and providing improvement recommendations as necessary.

- **Asset Capacity Trending**

Individual summaries for selected Schneider Electric UPS and Cooling systems, these reports provide guidance with respect to maximizing asset life cycle reliability.

Physical layout management	Rack space	Power supply management
Optimize IT room design for energy efficiency and information security	Compliance with generally accepted standards helps maximize uptime	Balance downtime risk with cost of power redundancy
Air conditioning management	Air distribution management	Asset management planning
3D thermal modeling identifies over cooling and hot spots	Separating hot and cold air flow increases energy efficiency	Manage preventive maintenance visit and component replacement scheduling to minimize budget requirements
